(54) METHOD FOR IMPROVING FATIGUE LIFE AND LONG-LIFE METAL MATERIAL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a new method for improving the fatigue life of metal materials, which solves problems in the conventional fatigue-improving methods for metal materials like reducing stress concentration and introducing compressive stress, as a construction efficiency, a skill of a builder and a quality control can not be conducted because there is no means for measuring the improved effect.

SOLUTION: The method for improving the fatigue life comprises pretreating a portion which may cause the fatigue of the metal material, treating it with ultrasonic shock, and subsequently conducting a quality assurance inspection, to improve the fatigue life.
